

Disaster Recovery as a Service (DRaaS)

IT infrastructure and system applications are one of the most business critical operations. System outages and downtime are highly preventable if your business continuity plans include the right solutions.

Why DRaaS?

System downtime can often result in business grinding to a halt, with potential losses of data, resource and revenue that can run into £1,000s per hour. According to Gartner the average cost of downtime to a business is £4,400 per minute.

This is usually precipitated by some form of disaster, it can strike at anytime from anywhere, ranging from a force majeure to basic human error.

It is a fact that some things are outside of your control. However, what is within your control is the steps you take to mitigate against risk of disaster and having plans in place to ensure your business can continue to operate should the worst happen.

What is DRaaS?

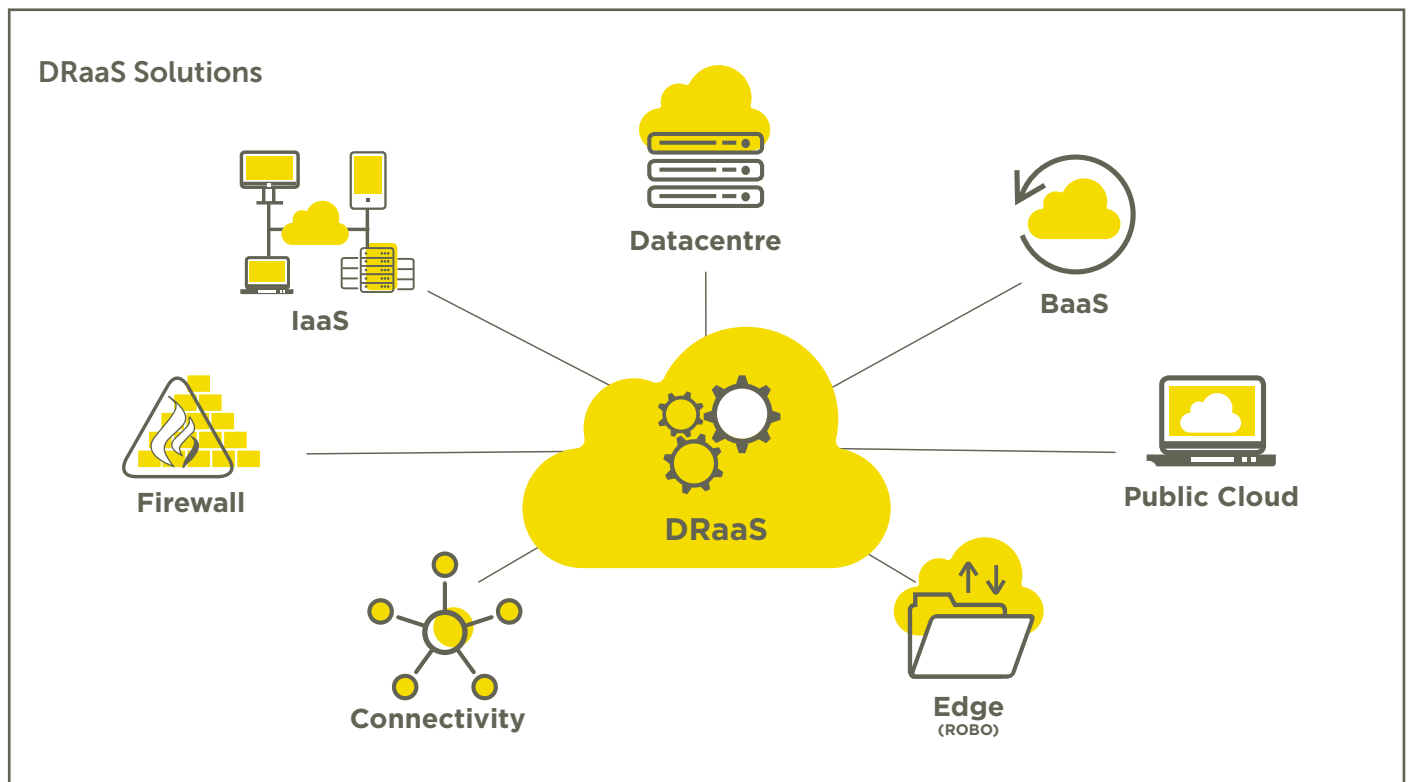

Disaster Recovery as a Service (DRaaS) is a solution designed to prevent, protect and secure business infrastructures, networks and system applications from outages and downtime. It is simple to implement, cost effective, easy to run and mitigates risk, protecting your critical IT infrastructure and system applications.

Why M247?

With over 15 years expertise in hosting and datacentre environments, an industry enviable global network reach, and a team of experts at your disposal, we are the perfect choice of technology partner to protect and secure your most important business assets.

M247 DRaaS options include:

- Full system and application replication
- System failover and failback ability
- Workload recovery
- Backup
- Managed Firewalls
- M247 Cloud (public & private)
- Resilient connectivity

Disaster Recovery as a Service (DRaaS)

Our DRaaS solution is fully flexible. We know and appreciate that not all businesses are the same and requirements can vary. Your solution can be designed with you and your specific needs in mind, to ensure you choose what is right for you.

- **M247 Cloud**
Full workload mobility between public, private and hybrid cloud
- **State of the art datacentres**
24/7 monitoring, business continuity, high capacity connectivity and secure housing environment, ISO27001 accredited
- **Next generation virtual datacentre**
Includes All Flash storage, next generation computing, low latency networking and fully software defined
- **Data Backup**
Optional backup to prescribed point in time, including cloud locality (off site backup copy)
- **Global capability and reach**
One of the world's largest privately owned connectivity networks supporting your geographic expansion plans

FEATURES	BENEFITS
OpEx model	CapEx free solutions, no expensive upfront costs for equipment or ongoing operational maintenance
Operational cost savings	Save on cost of hardware maintenance, space, power, secure controlled environment and staffing costs
Any point in time recovery	Recover workloads from any point in time Replicate from one to thousands of workloads instantly with a click.
Failover and failback	Multiple workloads can failover and failback from individual servers/application workloads or entire datacentre
Infrastructure agnostic	Virtual or physical environment with Infrastructure as a Service (IaaS)
Choice of operating systems	Supports most workloads including VMware or Hyper-V, no restrictions
Storage options	All Flash storage
Advanced RTO and RPO	Lowest availability; RTO of minutes, RPO of seconds
High availability of service	Cloud based datacentres significantly improve the availability of business critical applications and a 99.95% SLA
Self-service and analytics portal	Always in control with single click recovery and continuous insight
System testing	Test system instantly with no disruption in a sandbox environment
Multiple infrastructure deployment options	Choice of on premise, Edge, private or public cloud
Workload mobility	Migrate workloads often with cost savings between clouds
Speed of delivery	Existing M247 customers can benefit for expediated go live dates on DRaaS solutions
